LAB REPORT

Experiment Date : 24/10/2025

Experiment No : 02

Course Title : Structured Programming Language Lab

Course Code : CSE-102

Experiment Name: Lab report (Array)

Submitted By:

Name : Tanushree Das

ID No : 20254103353

Intake : 56

Section : 09

Program : B.Sc. in CSE

Submitted To:

Name : Shuvo Biswas

(Lecturer)

Dept. of CSE

**Bangladesh University of Business
& Technology**

Date of Submission : 26/10/2025

1) Write a C program to read and print elements of array – using recursion.

Code:

```
#include <stdio.h>

void readArray(int a[], int i, int n) {
    if (i < n) {

        printf("Enter element %d: ", i + 1);
        scanf("%d", &a[i]);
        readArray(a, i + 1, n);
    }
}

void printArray(int a[], int i, int n) {
    if (i < n) {
        printf("%d ", a[i]);
        printArray(a, i + 1, n);
    }
}

int main() {

    int a[50], n;

    printf("Enter size of array: ");

    scanf("%d", &n);

    readArray(a, 0, n);

    printf("Array elements are: ");

    printArray(a, 0, n);

    return 0;
}
```

Output:

A screenshot of a Windows command prompt window titled "F:\C program\Print ElementC". The window shows the execution of a C program. The user enters the size of the array as 5. Then, they enter five elements: 50, 60, 70, 80, and 90. The program then prints the array elements as "50 60 70 80 90". It also shows the process returned 0 (0x0) and the execution time was 9.920 seconds. The prompt "Press any key to continue." is displayed at the bottom.

```
"F:\C program\Print ElementC" × + ∨
Enter size of array: 5
Enter element 1: 50
Enter element 2: 60
Enter element 3: 70
Enter element 4: 80
Enter element 5: 90
Array elements are: 50 60 70 80 90
Process returned 0 (0x0)   execution time : 9.920 s
Press any key to continue.
```

2. Write a C program to print all negative elements in an array.

Code:

```
#include <stdio.h>

int main() {

    int a[50], n, i;

    printf("Enter size of array: ");
    scanf("%d", &n);

    printf("Enter %d elements:\n", n);
    for (i = 0; i < n; i++)

        scanf("%d", &a[i]);
    printf("Negative elements are: ");

    for (i = 0; i < n; i++) {
        if (a[i] < 0)
            printf("%d ", a[i]);
    }
    return 0;
}
```

Output:

A screenshot of a Windows command prompt window titled "F:\C program\PrintNegativef". The window shows the execution of a C program. The user enters '7' for the array size and then '0 -2 5 -7 8 -10 11' for the elements. The program outputs 'Negative elements are: -2 -7 -10'. It also shows 'Process returned 0 (0x0)' and 'execution time : 57.976 s'. The prompt 'Press any key to continue.' is visible at the bottom with a cursor line.

```
"F:\C program\PrintNegativef" × + ∨
Enter size of array: 7
Enter 7 elements:
0 -2 5 -7 8 -10 11
Negative elements are: -2 -7 -10
Process returned 0 (0x0)   execution time : 57.976 s
Press any key to continue.
|
```

3. Write a C program to find sum of all array elements – using recursion.

Code:

```
#include <stdio.h>

int sumArray(int a[], int i, int n) {
    if (i < n)
        return a[i] + sumArray(a, i + 1, n);
    else
        return 0;
}

int main() {
    int a[50], n, i;

    printf("Enter size of array: ");
    scanf("%d", &n);

    printf("Enter %d elements:\n", n);
    for (i = 0; i < n; i++)
        scanf("%d", &a[i]);

    int sum = sumArray(a, 0, n);
    printf("Sum of all elements = %d", sum);

    return 0;
}
```

Output:

```
"F:\C program\SumOfAllElem" × + v
Enter size of array: 10
Enter 10 elements:
10 20 30 40 50 60 70 80 90 100
Sum of all elements = 550
Process returned 0 (0x0)    execution time : 12.094 s
Press any key to continue.
|
```

4) Write a C program to find maximum and minimum element in an array – using recursion.

Code:

```
#include <stdio.h>

int findMax(int a[], int i, int n) {
    if (i == n - 1)
        return a[i];
    int max = findMax(a, i + 1, n);
    return (a[i] > max) ? a[i] : max;
}

int findMin(int a[], int i, int n) {
    if (i == n - 1)
        return a[i];
    int min = findMin(a, i + 1, n);
    return (a[i] < min) ? a[i] : min;
}

int main() {
    4

    int a[50], n, i;
    printf("Enter size of array: ");
    scanf("%d", &n);

    printf("Enter %d elements:\n", n);
    for (i = 0; i < n; i++)
        scanf("%d", &a[i]);

    printf("Maximum = %d\n", findMax(a, 0, n));
    printf("Minimum = %d", findMin(a, 0, n));

    return 0;
}
```

Output:

A screenshot of a Windows command prompt window titled "F:\C program\Find-Maximun". The window shows the execution of a C program. The user enters "5" for the array size and "10 50 40 20 100" for the elements. The program outputs "Maximum = 100" and "Minimum = 10". It also shows "Process returned 0 (0x0)" and "execution time : 9.358 s". The prompt "Press any key to continue." is displayed at the bottom, with a cursor on a new line.

```
"F:\C program\Find-Maximun" × + v
Enter size of array: 5
Enter 5 elements:
10 50 40 20 100
Maximum = 100
Minimum = 10
Process returned 0 (0x0)    execution time : 9.358 s
Press any key to continue.
|
```

5) Write a C program to search an element in an array using linear search.

Code:

```
#include <stdio.h>

int main() {

    int a[10] = {10, 2, -1, 0, 3, 7, -5, 9, 4, 6};
    int search_value, i, flag = 0;

    printf("Enter search value: ");

    scanf("%d", &search_value);

    for(i = 0; i < 10; i++) {
        if(search_value == a[i]) {
            flag = 1; // found
            break;
        }
    }

    if(flag == 1)
        printf("Value is found at index %d\n", i);

    else

        printf("Value not found\n");

    return 0;
}
```

Output:

```
"F:\C program\SerachElement" X + v
Enter search value: 2
Value is found at index 1

Process returned 0 (0x0)   execution time : 2.900 s
Press any key to continue.
|
```

"F:\C program\SerachElement" X

+ v

Enter search value: 7
Value is found at index 5

Process returned 0 (0x0) execution time : 1.610 s
Press any key to continue.

"F:\C program\SerachElement" X

+ v

Enter search value: 6
Value is found at index 9

Process returned 0 (0x0) execution time : 1.365 s
Press any key to continue.
